

DAIMLER TRUCK

What is "What's New"?

The "What's New" section on the smartIBL platform informs users directly upon login about the latest news, updates and changes on the platform. This way, all users stay up to date – without having to actively search for information.

What's new?

 The "What's New" window can now be manually collapsed after reading.

Previously, the "What's New" section was displayed permanently with no option to hide it. With the new update, users now have the ability to minimize the window themselves once the content has been acknowledged.

How it works

Step	Description
1 Open	When accessing smartIBL, the "What's New" window appears automatically as usual
2 Read	News and updates are displayed and can be reviewed
3 Collapse	With a click on the arrow or minimize symbol, the window can be collapsed (see screenshot)
4 Expand	The window can be expanded again at any time to view the information once more
