

DAIMLER TRUCK

Datacheck of VDA4913

In the Consignment Cockpit application, all data where an error in the VDA structure has been detected are displayed.

By selecting the "Hierarchy Error" filter, all affected EDI shipments are displayed.

Unlike A, B, and C errors, structural errors cannot be precisely pinpointed to show where the cause lies. Here, the original file must be loaded and examined.

The sequence for a 4913 must be as follows:

- 711
- 712
- 713
- 714
- 716 – if available
- 715
- 718 – if available
- 719
