

DAIMLER TRUCK

Datacheck of VDA4921

In the Transport Cockpit application, all data where an error in the VDA structure has been detected are displayed.

By selecting the "Hierarchy Error" filter, all affected EDI transports are displayed.

Unlike A, B, and C errors, structural errors cannot be precisely pinpointed to show where the cause lies. Here, the original file must be loaded and examined.

The sequence for a 4921 must be as follows:

751
752
753
754
755
759
